EXPERIENCE:

KMF Traffic Group, LLC. Stuart, FL Principal of Traffic Data Collection Company August 2001 to present

Coordinate all activities, client development, training, scheduling, project administration, field duties, downloading traffic data files and report preparation and assure the technical quality and on-time delivery of the work products. Since 2001 KMF has conducted over 300 manual traffic surveys and ATR studies for traffic engineering firms in Florida. All of these studies have been completed and delivered in a timely fashion. Some of our bigger projects are as follows:

Hollywood, FL. Collected ADT bi-directional traffic volume data at 5 locations and collected turning movement data at 7 major intersections within the vicinity.

Wellington, FL. Collected ADT bi-directional traffic volume and speed at 26 locations for a period of three consecutive days.

West Palm Beach, FL. Collected ADT bi-directional traffic volume and speed at 5 locations for a period of three consecutive days.

Weston, FL. Collected ADT bi-directional traffic volume data at 2 locations and collected turning movement data at 2 major intersections.

New Smyrna Beach, FL. Collected turning movement data and existing lane configuration at 3 major intersections, and videotaped the network of streets within the study area.

Naples, FL. Collected turning movement data and existing lane configuration at 3 major intersections, and videotaped the network of streets within the study area.

Fort Lauderdale, FL. Collected turning movement data and existing lane configuration at 2 major intersections, and one ATR.

Riviera Beach, FL. Collected ADT bi-directional traffic volume and speed at 3 locations for a period of three consecutive days

Cape Canaveral, FL. Collected ADT bi-directional traffic volume and speed at 2 locations for a period of three consecutive days and 2 turning movement count.

Coral Spring, FL. Collected turning movement data and existing lane configuration at 3 major intersections.

Jupiter, FL. Collected turning movement data and existing lane configuration at 5 major intersections.

Queuing Analysis – Stacking, Boynton Beach, East and West Boca, FL. Collected maximum queue at 3 teller lanes every 5 minutes for 8 hours at three different Bank branch offices for two days each.

Trip Generation Study - Collected Automatic Traffic Recorder bi-directional volume at four different hotels in Jacksonville, Orlando, Ocala and Lakeland for one week each.
